

Nimbus Screenshot

A Screenshot, Annotation, and Screen Recording Tool

[Nimbus Screenshot](#) is a free Google Chrome extension that allows you to capture an image from your computer screen and then annotate that image with a robust palette of annotation tools. There are many capture options available. You can capture the entire screen or a portion of the screen, and you can even scroll down and capture a longer webpage than can appear on screen at one time. Nimbus also includes an option to record a video screen cast. Images and videos can be downloaded, saved to online services, or saved in your free Nimbus account, although an account is not required to use this tool.

In the Classroom

- Label parts of an image.
- Create visual directions.
- Provide feedback (self or peer).
- Blur out names and data to preserve privacy.
- Take notes on a web page.
- Capture images as research.

Tool Features

- Capture an image from anything that you can display in a Google Chrome browser.
- Capture various areas (whole page, application window, selected area, and more).
- Record a video screen cast.
- Annotate images with arrows, text, boxes, pen markings, and more.
- Save to Google Drive, Dropbox, or Slack.
- Save the image to a free Nimbus account.
- Download the annotated image or screen cast.
- Print the annotated image.
- Add your own watermark (with free account).

Getting Started

- Install the [Nimbus Screenshot Chrome extension](#).
